## Rotameter Design Improvements

We have redesigned our rotameters (also called variable area flow meters) to include the following improvements:

- Improved top and bottom stops – More robust design
- Limit switches – Same switch for max and min flow
- Guiding rod – Made of PEEK included for all 2½" and some 2" models

The rotameters are dimensionally compatible with the current design, making for an easy transition to the new design. The end connectors and nuts will not change. In addition, the flow rate ranges will also remain the same. The part numbers for the complete rotameter will not change; however the component part numbers will. Although the new design of rotameter and old design are interchangeable, the individual components are not. The transition will begin in April and will continue until inventory of the previous design has been exhausted.

Feel free to contact us with any questions or comments.
