

Notice of RoHS Compliance

In accordance with your request, the information on Fluoro-Plastics's products and use of heavy metals as well as brominated flame retardants as restricted by directive 2000/53/EC, CONEG 94 and RoHS directive 2002/95/EC is as follows:

Both directive 2000/53/EC and CONEG 94 suppress the use of heavy metals such as Lead, Mercury, Cadmium, Antimony, Arsenic, and Hexavalent Chromium. Fluoro-Plastics, Inc. and our suppliers do not use any of the above as intentional ingredients in the production of our virgin PTFE and/or UHMW-PE products. To the best of our knowledge, our products do not contain heavy metals. These metals are not commonly tested for in a typical analysis.

Fluoro-Plastics, Inc. and our suppliers do not use PBB (polybrominated biphenyl), PBDE (polybrominated diphenyl ether), penta BDE (pentabromodiphenyl ether) or octaBDE (octabromodiphenyl ether) as intentional ingredients in the manufacture of our virgin PTFE products, nor in the manufacture of our UHMW-PE products. This includes all virgin PTFE plate, sheet, rod, tube, thin film and extruded products. To the best of our knowledge, our products do not contain brominated chemicals. These chemicals are not commonly tested for in a typical analysis.

The only caveat to this declaration is that it applies only to virgin PTFE products and does not cover compounded PTFE products

The foregoing is valid as of this date, and may be amended in the future. If you have further questions, please feel free to call us.
