

TITAN TECH

POLYETHYLENE TANKS & BOLTLESS ADAPTERS

Tank Fitting Technologies is the creator of the world's true line of Bolt Less Tank Adaptors offering the holding power of bolted fittings without having to drill additional holes in the tank wall which can lead to leaks.

The absence of flange bolts increases the surface sealing area resulting in a superior seal. This patented new design produces a tension seal that compresses the gasket producing a uniform positive seal. One of the most unique features of this new line of fittings is that they will not harm the tanks integrity resulting in a longer tank life.

Titan Boltless Tank Fittings makes installations faster, easier and more precise than other fittings on the market today. Tank installers love the fact that they just have to bore one hole and the fitting lines up perfectly every time.

TFT tank fittings are the innovative solution for your Commercial, Industrial, Agricultural and Chemical applications where needs.

The Titan Advantage:

- Faster to install.
- Provides a leak proof seal.
- Save time and money, do it right the first time.
- 1-year Manufacturer Warranty.
- Sizes 1" 1-1/2" 2" 3" 4"
- Titan fittings are available with fnpt x fnpt and now available, the Eagle manifold.
- Viton or EPDM gaskets available.
- Made in the USA.

Installation Tools:

Tank Fitting Technologies now introduces Pre-Set Tee Handle Torque Wrenches to be used for installing all TITAN Fittings. This tool makes an easy installation even easier by taking the guess work out of tightening the fitting bolts. Torque wrenches are preset to compress gaskets to exact specifications. No mistakes, no under or over tightening, simply twist until it clicks and you are done. With this tool anyone can produce a clean and professional installation in just minutes. Wrenches come with 2 size tips for installing fittings up to 4".

- Highly durable
- Fast, Easy One-handed tightening in the right -hand direction
- T-shape creates effective leverage
- Flanged reversing collar disengages the ratchet mechanism and locks the tool for conventional backing off and loosening.
